OBIX — Provenance & Development Record

What This Repository Is

OBIX (OBINexus Interface Experience) is the UI/UX SDK layer of the OBINexus Computing constitutional computing framework, developed and maintained by **Nnamdi Okpalan** (okpalan@protonmail.com).

This repository (`github.com/obinexusmk2/obix`) contains the source for all packages published to npm under the `@obinexusltd` organisation scope.

Repository Identity

Field	Value
GitHub (source)	https://github.com/obinexusmk2/obix
npm scope	https://www.npmjs.com/org/obinexusltd
Author	Nnamdi Okpalan / OBINexus Computing
Contact	okpalan@protonmail.com
License	MIT
Monorepo root	`@obinexusltd/obix-monorepo`

Package Registry (29 packages published — March 2026)

Drivers (platform interface layer)

Package	Description
`@obinexusltd/obix-driver-accessibility-tree`	ARIA/live region management and screen reader bridge
`@obinexusltd/obix-driver-animation-frame`	requestAnimationFrame scheduling and timeline orchestration
`@obinexusltd/obix-driver-compositor`	Layer management, z-index optimisation, occlusion culling

Package	Description
`@obinexusltd/obix-driver-dom-mutation`	Deterministic patch generation and snapshot updates
`@obinexusltd/obix-driver-font-layout`	Font metrics and layout measurement
`@obinexusltd/obix-driver-gpu-acceleration`	WebGL/WebGPU canvas rendering and shader management
`@obinexusltd/obix-driver-input-event`	Pointer, keyboard and gesture normalisation
`@obinexusltd/obix-driver-media-query`	Responsive query observation and breakpoint management
`@obinexusltd/obix-driver-network-stream`	WebSocket/SSE for telemetry and real-time state sync
`@obinexusltd/obix-driver-storage-persistence`	Local/session storage with versioned snapshots

Bindings (cross-language bridge layer)

Package	Description
`@obinexusltd/obix-binding-go`	Backend microservices, concurrent state management
`@obinexusltd/obix-binding-swift`	iOS/macOS native rendering bridge
`@obinexusltd/obix-binding-cpp`	Legacy system integration, embedded targets
`@obinexusltd/obix-binding-python`	ML/AI integration, data science workflows
`@obinexusltd/obix-binding-zig`	Systems programming, compile-time optimisation
`@obinexusltd/obix-binding-java-kotlin`	Android native, enterprise backend
`@obinexusltd/obix-binding-csharp`	.NET/Unity integration
`@obinexusltd/obix-binding-typescript`	TypeScript-native API surface
`@obinexusltd/obix-binding-rust`	Memory-safe systems integration
`@obinexusltd/obix-binding-lua`	Scripting and embedded runtime

SDK Core (application layer)

Package	Description
`@obinexusltd/obix-core`	Heart/Soul UI/UX runtime — component lifecycle, state halting, data-oriented architecture
`@obinexusltd/obix-components`	Base UI primitives — accessibility-first, FUD-mitigating components
`@obinexusltd/obix-state`	State machine minimisation (automata-based state management)
`@obinexusltd/obix-router`	SPA navigation with scroll restoration, deep linking
`@obinexusltd/obix-telemetry`	State tracking, policy decorators, QA matrix integration
`@obinexusltd/obix-forms`	Validation, autocomplete, progressive enhancement
`@obinexusltd/obix-accessibility`	WCAG 2.2 enforcement, focus management, ARIA automation
`@obinexusltd/obix-adapter`	Data-oriented paradigm translation layer
`@obinexusltd/obix-cli`	Build tooling, schema validation, SemVerX management

Build & Test Verification

Recorded 13 March 2026, 20:17 BST:

```
Build: PASS — all 29 packages compiled via tsc with no errors
Tests:
  obix-core        31/31 passed
  obix-components  51/51 passed  (incl. FUD compliance, ARIA, touch target
policies)
  obix-state       36/36 passed
  obix-router       1/1  passed
  obix-telemetry    1/1  passed
  obix-forms        1/1  passed
  obix-motion       1/1  passed
  All drivers:      1/1  passed each
```

Relationship to OBINexus Ecosystem

OBIX is the **UI/UX surface layer** of the OBINexus constitutional computing framework. The dependency chain is:

```
libpolycall-v1  (github.com/obinexusmk2/libpolycall-v1)
     ↓  protocol and binding foundation
obix            (github.com/obinexusmk2/obix)
     ↓  compiled and published as
@obinexusltd/*  (npmjs.com/org/obinexusltd — 29 packages)
```

`libpolycall-v1` provides the cross-language call protocol and driver abstraction that OBIX bindings implement. OBIX is not a standalone project — it is the browser/application-facing expression of the OBINexus infrastructure stack, which also includes:

- `riftlang.exe → .so.a → rift.exe → gosilang` (core toolchain)
- `nlink` / `polybuild` (build orchestration)
- NSIGII Tripolar Trident (signal architecture)
- MMUKO-OS (governance layer)

Authorship Declaration

This work was conceived, architected, and implemented by **Nnamdi Okpalan**, founder of OBINexus Computing, operating under the GitHub accounts `obinexusmk2` and `obinexus`.

All commits, package publications, and architectural decisions reflect original independent authorship. The `@obinexusltd` npm organisation is the publishing identity for work originating from this repository.
